

Welcome to the future

Introducing Kommerling Gold, a new generation of PVCu windows and doors for the discerning, environmentally aware homeowner.

These beautifully engineered windows and doors are a world apart from the PVCu products of years ago. Designed to reflect the aesthetic appeal of traditional timber, these frames will really enhance and complement your home.

Heat and energy loss through windows and doors is a major contributor to global warming, and the environment played a key part in the development of Kommerling Gold. Superior insulation ensures heat-loss and energy is reduced, so your home stays warmer, cutting your heating costs and reducing harmful emissions.

In addition, Kommerling contains a lead-free stabiliser. This means your windows and doors look fresh and new for longer, but can eventually be recycled without lead damaging the environment.

You'll also be pleased to know that our windows and doors are packed with advanced security features, including corrosion resistant hardware and the latest shootbolt locking systems.

Why not think about the style of your new windows? As well as hundreds of possible styles, you can also specify tilt & turn (inward opening) windows, reversible and pivot windows and even traditional-looking box-sash style vertical sliders.

Naturally, we can install a beautiful range of PVCu doors to compliment your new windows, including entrance doors, patio and french doors.

Gold System

Kömmerling Gold is a beautifully engineered range of PVCu windows and doors developed with the discerning homeowner in mind. Packed with advanced features and available in a wide range of styles and finishes, these products will enhance any home.

Technical Specification
