

A distinctive outlook

If you have an older, traditional home or want a distinctive look to a newer property, consider aluminium windows and doors.

Modern aluminium frames can be fitted directly into the brickwork or into existing timber subframes, and combine strength and durability with slim sightlines to allow maximum light and sunshine into your home. Ideal for replacing old aluminium or steel windows and doors, today's aluminium frames are elegant, stylish and virtually maintenance free.

What's more, our innovative approach means you have the benefit of great insulation to keep your home warm and quiet, and advanced security systems built-in as standard.

The power-coated finish, available in a range of colours, ensures your windows and doors remain gleaming for years to come, with optional woodgrain foils for that added appeal. A range of glass designs are also available, and manufactured using the latest energy-efficient glass technology to comply with stringent new Building Regulation standards.

Its little wonder that many discerning homeowners are choosing to replace their old frames with modern aluminium windows and doors. So why not take a closer look?

Aluminium doors and windows

Thermally improved aluminium windows and doors give you designed, strength and security to help resist the most unwelcome visitors. By using shaped outerframes and vents the characteristics of traditional windows can be introduced in slim and attractive sight lines.

Technical Information
